Software Engineer with 2 years of experience building React/Next.js products, FastAPI-backed systems, workflow automation platforms, admin/RBAC tools, and GenAI agent/RAG workflows.

Experience

Rapid Innovation

June 2024 – June 2026

Software Engineer — Product Unit (RUH AI)

Remote

- Operated as a core full-stack contributor across the product unit, owning features end-to-end from frontend UX to backend services and GenAI infrastructure — collaborating across cross-functional teams to ship production releases on tight timelines.
- Engineered the production **AI Workflow Automation Builder** using React, Next.js, TypeScript, and Bun/Elysia, delivering workflow canvas UX, Pipedream/OAuth trigger flows, MCP marketplace integration, scheduler management, execution controls, activity logs, and AI-assisted workflow generation.
- Refactored a 1,947-line WorkflowNode component** into modular React components, hooks, services, and utilities, reducing core complexity by ~80%, improving maintainability, enforcing TypeScript strict mode, and expanding coverage across OAuth, MCP, credential, store, and provider layers.
- Built a **Super Admin and operations platform** across 10+ modules, including organisations, users, AI agents, workflows, credit/subscription management, marketplace review queues, RBAC permission wiring, and audit-log views backed by REST and gRPC/Protobuf APIs.
- Implemented **AI model management infrastructure** across admin UI, API gateway, and agent-builder service, including OpenRouter provider/model sync, activation toggles, global and per-agent limits, and consolidation of **12 endpoints into 3** filter-driven APIs.
- Designed **org-scoped MFA and multi-role RBAC** using Redis-backed OTPs with TTL/attempt lockout, timing-safe verification, session stamping, MFA boot-gate UI, Redis-cached permission unions, and super-admin attribution across audit logs.
- Delivered **agent deployment and runtime infrastructure** with versioning, marketplace publish/update flows, secret-masked environment configuration, staged draft/apply flows, SSE/polling progress, sandbox backup/restore, and rollback across React, Python, and Protobuf contracts.
- Applied **GenAI engineering** across OpenClaw agents, LangChain/LangGraph prototypes, RAG pipelines, prompt engineering, MCP tool orchestration, multimodal input handling, and event-driven notifications using Pub/Sub, Kafka, and SendGrid.

Associate Engineer —

June 2024 – April 2025 · Remote

- Phynd** (phynd.games): Built a responsive, animation-rich UI across mobile, TV, and desktop using React.js and styled-components, translating Figma designs into production-ready interfaces with cross-device consistency.
- Stabull Finance** (app.stabull.finance): Shipped a Web3 stablecoin Swap and Liquidity Pool platform using TypeScript, React, wallet authentication, and REST API integration on strict delivery timelines.
- Blendbox**: Architected a canvas-based image blending engine using React.js and Konva; profiled rendering bottlenecks, improved canvas throughput, and reduced UI latency.

Projects

NightShift Agent | Python, Claude Code, GitHub CLI, Docker, Linear API

github.com/Rishabh-Kala/Night-Shift-Agent

- Built an autonomous development agent in Python that converts Linear tickets into GitHub pull requests by collecting ticket context, resolving affected repositories, running Claude Code sessions, creating PR summaries, and updating Linear ticket status.
- Designed a multi-stage agent pipeline with task enrichment, repository filtering, isolated Git worktrees, ThreadPoolExecutor-based parallel execution, retry tracking, and a two-agent TDD workflow using a Test Agent and Dev Agent.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), Python, Java, SQL, HTML5, CSS3

Frontend: React.js, Next.js, Zustand, Redux Toolkit, React Query, Tailwind CSS, MUI/Joy UI, styled-components, Konva, Storybook

Backend: FastAPI, Node.js, Express.js, Bun/Elysia, REST APIs, gRPC/Protobuf, JWT/OAuth, RBAC, WebSockets, Microservices

AI / GenAI: LLM Integration, RAG Pipelines, LangChain, LangGraph, Prompt Engineering, Agentic Workflows, MCP Tool Orchestration, OpenRouter, Pipedream, n8n

Databases & Storage: PostgreSQL, MongoDB, Redis, MySQL, Supabase, GCS, S3, Query Optimization

Infra & Tools: Docker, GitHub Actions, GCP/GCS, Pub/Sub, Kafka, Git, GitHub CLI, Postman, Linear, Figma

Testing: Jest, React Testing Library, Vitest, Cypress, Playwright, ESLint, TypeScript Strict Mode

Education

JIMS Engineering Management Technical Campus

July 2020 – July 2024

Bachelor of Technology in Computer Science Engineering | CGPA: 8.6

Delhi, India

- Winner, Internal Hackathon (JIMS EMTC) · Semi-Finalist, IEEE DTU National Hackathon, Vihaan 6.0
