SUMMARY

Full-stack AI Platform Engineer with 2 years of production experience building AI-native workflow systems, agent deployment infrastructure, and scalable SaaS platforms. Proficient across React.js, Next.js, TypeScript, Python, FastAPI, and gRPC — with hands-on AI engineering across LLM integration, agentic workflows, RAG, prompt engineering, and MCP tool orchestration. Track record of owning complete product surfaces end-to-end, shipping in fast-paced startup environments, and maintaining high engineering standards through testing, code reviews, and CI/CD quality gates.

EXPERIENCE

Rapid Innovation

June 2024 – June 2026

Software Engineer — Product Unit (RUH AI)

April 2025 – June 2026 · Remote

- Led core development of a production **AI Workflow Automation Builder** in React/Next.js and Bun/Elysia — shipping workflow canvas UX, Pipedream trigger flows with configurable props and OAuth, MCP/tool marketplace integration with multi-node state sync, scheduler management, activity logs, run/stop execution controls, and AI-assisted workflow generation with auto-import and public workflow support.
- **Refactored a 1,947-line WorkflowNode component** into modular React components, hooks, services, and utilities — reducing core complexity by ~80%, enforcing TypeScript strict mode, and adding broad test coverage across components, OAuth, MCP, credential, store, and provider layers.
- Engineered a **Super Admin and internal operations platform** end to end: organisations, users, AI agents, workflows, credit management, subscriptions, campaigns, waitlist, marketplace review queues, inbox rotation, key management, RBAC permission wiring, and audit-log views across 10+ fully operational modules.
- Implemented **AI model management infrastructure** across admin UI, API gateway, proto definitions, and agent-builder service: OpenRouter provider/model sync, activation toggles, global model limits, and per-agent model IDs — consolidating **12 endpoints into 3** filter-driven APIs and reducing surface area by **75%**.
- Designed and shipped **org-scoped admin MFA and multi-role RBAC**: Redis-backed OTPs with TTL/attempt lock-out, timing-safe verification, session stamping, MFA boot-gate UI, reusable OTP design system component, Redis-cached permission unions, permission guards, and super-admin attribution across all logs and transactions.
- Delivered **agent deployment and runtime infrastructure**: explicit versioning, marketplace publish/update flows, GitHub-based in-place deployment updates, runtime environment-variable reconfiguration with secret masking, staged draft/apply flows, SSE/polling progress, sandbox backup/restore, and rollback callbacks across React, TypeScript, Python, and protobuf contracts.
- **Hardened cloud security infrastructure**: Redis TLS/AUTH across 10+ GCP Memorystore services, migrated GCS to private buckets with signed URLs and GKE Workload Identity, replaced base64 credentials with Workload Identity, and fixed proxy-aware rate limiting across load-balanced services.
- Integrated **event-driven notification system** using Pub/Sub, Kafka, and SendGrid for auth emails, admin MFA OTPs, support tickets, subscriptions, agent purchases, credit-threshold alerts, and lifecycle notifications; bootstrapped **350+ scheduler-service** and **880+ notification-service** tests covering unit, integration, security, resilience, and contract layers.
- Applied **GenAI engineering**: built OpenClaw agents, LangChain/LangGraph agentic workflow prototypes, RAG pipelines, prompt engineering, MCP tool orchestration, multimodal AI input handling, and LLM-assisted development flows in Python and TypeScript.

Associate Engineer

June 2024 – April 2025 · Remote

- **Phynd** (Link): Delivered a fully responsive, animation-rich UI across mobile, TV, and desktop from Figma to production using React JS and styled-components with pixel-accurate cross-device consistency.
- **Stabull Finance** (Link): Shipped a Web3 Swap and Liquidity Pool platform in TypeScript/React with wallet authentication and REST API integration; delivered production-ready releases on strict timelines.
- **Blendbox**: Architected a canvas-based image blending engine using React JS and Joy UI; designed the Admin Panel frontend and resolved rendering performance bottlenecks through profiling, improving canvas throughput and reducing UI latency.

PROJECTS

NightShift Agent — Autonomous Development Agent

github.com/Rishabh-Kala/Night-Shift-Agent

- Built an **OpenClaw-compatible**, self-contained autonomous development agent in Python that polls Linear tickets, enriches ticket context, resolves affected repositories, runs Claude Code sessions, creates GitHub PRs, and updates ticket status end to end.
- Designed a **7-stage agentic pipeline** (Collect, Enrich, Resolve Scope, Prepare Repos, Test, Implement, Ship) with ThreadPoolExecutor-based parallelism across tickets and repositories, isolated Git worktrees, retry tracking for partially completed repos, and LLM-assisted repository filtering.
- Engineered a **two-agent TDD workflow**: a Test Agent generates stack-aware tests across unit, integration, contract, security, resilience, e2e-api, and e2e-browser layers before a Dev Agent implements the change without editing test files. Packaged the system with Docker, GitHub CLI, Node.js, and Claude Code for repeatable execution.

SKILLS

- **Languages**: TypeScript, JavaScript (ES6+), Python, HTML5, CSS3
- **Frontend**: React.js, Next.js, React Query, Tailwind CSS, styled-components, Joy UI, Canvas UI, Responsive/Animated UI, Design Systems, Storybook

- **Backend:** FastAPI, Node.js, Bun, Elysia, REST APIs, gRPC, Microservices, API Gateway Design, Protobuf
- **AI / GenAI:** LLM Integration, LangChain, LangGraph, RAG, Prompt Engineering, MCP Tool Orchestration, OpenRouter, n8n, Pipedream, Agentic Workflow Design, Multimodal AI, Model Management
- **Database & Infra:** PostgreSQL, Supabase, Redis (TLS/AUTH), GCS, Pub/Sub, Kafka, Workload Identity, Helm, Docker
- **Quality & Tools:** Git, Jest, React Testing Library, ESLint, TypeScript Strict Mode, Pre-Commit Hooks, Sonar, CI/CD, Figma, Postman, Mixpanel, Linear

EDUCATION

JIMS Engineering Management Technical Campus , Delhi, India	<i>July 2020 – July 2024</i>
B.Tech in Computer Science Engineering	CGPA: 8.6
Winner, Internal Hackathon (JIMS EMTC) · Semi-Finalist, IEEE DTU National Hackathon, Vihaan 6.0
